

LANZONI s.r.l.

BIRD DETERRENTS

Examples of applications

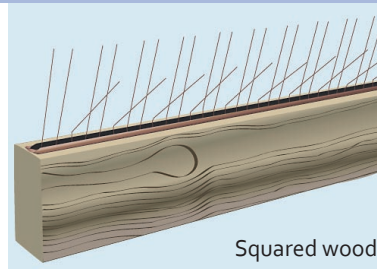

The mechanical bird deterrents with spikes manufactured by Lanzoni are permanent protection tools that prevent birds from perching on roof protections, windowsills, gutters, pipes and cables. They are an effective deterrent against every kind of bird.

The stainless steel or phosphor bronze spikes have proven to resist weather for long time.

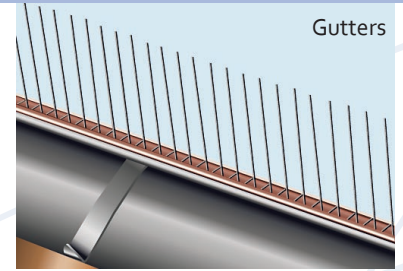

Lanzoni bird deterrents are available in different models, with spikes at different density and coverage, mounted on a steel, stainless steel, flexible steel, copper or polycarbonate support.

Our wide range of products allows the customer to choose the most suitable product according to the number of birds and to the area to protect.

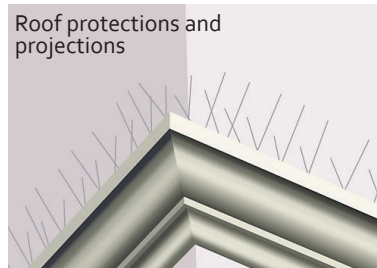

Laying can be carried out with thread-cutting screws, dowels, rivets, clamps and/or using special neutral or coloured silicone that guarantee perfect adhesion to the support and easy removing in case of need, without altering the surfaces.

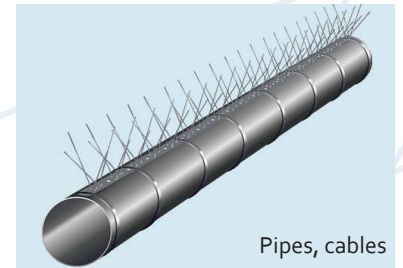

Squared wood

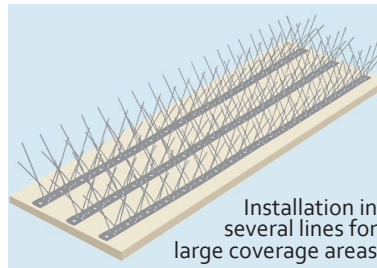

Gutters

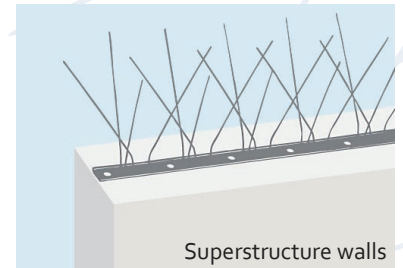

Roof protections and projections

Pipes, cables

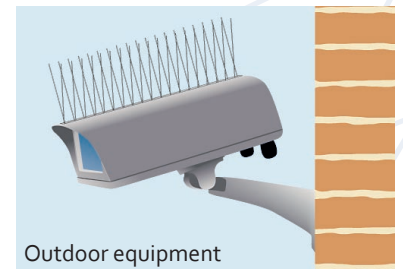

Installation in several lines for large coverage areas

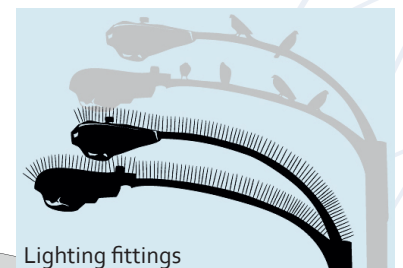

Superstructure walls

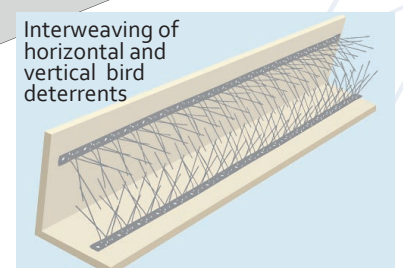

- Areas exposed to birds that can be protected with mechanical bird deterrents fitted with spikes.
- Installation along the gutters (rain water pipes) to prevent any ill-disposed person from reaching the upper grounds.

Outdoor equipment

Lighting fittings

Interweaving of horizontal and vertical bird deterrents
